John Foster Dulles Photoscape Online For Mac

Start debug session

To start the debug session, select a configuration from the Configuration dropdown, and then click the start button (or press F5).

You can debug your app on an Android emulator, Android device or iOS simulator. This extension provides experimental support for iOS devices.

More information about debugging using VS Code can be found in this guide.

Debugging on iOS device

Debugging on iOS device would require following manual steps.

- You need to install ideviceinstaller `brew install ideviceinstaller`
- In your launch.json file, set target to "device"
- Change the `jsCodeLocation` IP in your app using the steps detailed here.
- Choose **Debug iOS** configuration from the Configuration dropdown and press F5.
- Shake the device to open development menu and select "Debug in Chrome".
